Glanville is delighted to be part of the successful team that is delivering 55,500sq ft of new Grade A office accommodation within the Enterprise Zone at Milton Park, Oxfordshire.

The scheme comprises two strikingly designed three storey buildings that offer maximum flexibility in terms of accommodation space as well as innovative, energy efficient solutions.

The buildings incorporate large, full-height entrance atriums with stunning cantilever staircases and are served by a decked car park.

Our Geomatics team has recently been using its 3d laser scanning knowledge and expertise to record objects at the smaller end of the spectrum.

A recent project involved providing 3d scans, with a point precision of 0.1mm, to create incredibly detailed wire frame models of ornamental dragons. These CAD models provide the source data to print 3d replicas, and will allow the dragons to fly once more!

Using these highly specialised close range scanners the team now plans to expand its historic recording capabilities in conjunction with high resolution imagery and terrestrial laser scanning.

Glanville continues its longstanding association with Odeon Cinemas by carrying out a rolling programme of inspections of its extensive portfolio of cinemas throughout the UK and Ireland.

The diverse collection of properties surveyed range from modern out-of-town developments to historic Grade I listed theatres converted into multiple auditoria.

The types of construction materials used are commensurately diverse, ranging from steel and timber to decorative fibrous plaster and painted concrete.
Warfield

Success

Glanville has been working closely with Berkeley Homes to achieve planning consent for 690 new homes, 60 senior living apartments and a new primary school, in an attractive parkland setting north of Bracknell in Berkshire.

We have provided a diverse range of pre-planning consultancy services, including transport, flood risk (including river modelling) and drainage and utilities advice. Our involvement with the scheme is continuing with the detailed design of new highway infrastructure, river corridor improvements and engineering advice for Reserved Matters applications.

Business As Usual

Glanville has provided CDM co-ordinator and structural engineering services on a number of projects for Gaucho and CAU restaurants which replicate authentic Argentinean cuisine.

The latest project we have been involved with is Gaucho Piccadilly which has been refurbished and the top floor has been extended through the addition of a mansard roof.

The work was carried out in two phases to ensure there was no interruption to customer service throughout the construction process.

Skoda

Ashford

Glanville was appointed by Caffyns to work with SRA Architects to create a new Skoda dealership in Ashford, Kent. The project incorporates Skoda’s new retail concept and comprises a seven car showroom and six bay workshop.

We provided civil and structural engineering services for the remodelling of the building. The structural frame required reinforcing to create the showroom façade to the principal elevation due to the removal of bracing members that were providing stability to the building. We were able to enhance the structure through intelligent engineering solutions and achieve an uninterrupted glazed elevation.

Engineering, Design and Surveying Consultants

From inception to completion

Glanville Consultants is able to offer a wide range of professional advice through all stages of a project, from inception to completion. For over 40 years the firm has grown steadily and diversified, attracting a wide range of clients from both public and private sectors.

Glanville Consultants operates from offices in Oxfordshire and Hertfordshire and undertakes work throughout the British Isles and overseas, employing a multi-professional team of engineers, surveyors and other construction related specialists.
